

Garage Floor Coatings

The Garage Floor Coatings installation business has become one of the fastest growing new decorative concrete coating segments in the Continental United States today. VBP is proud to be a leader in this area. VBP manufacturers a wide range of Epoxy, Urethane and Poly-Urea products developed specifically for this coating arena. We offer 1 day to multiple day systems.

With VBP technology, you don't even have to worry about the weather. VBP has designed a group of additives to allow cure in low temperatures so you can keep on installing even in the winter. Whether you want low odor, non flammable products, low VOC, Chemical Resistant Waterborne Urethanes or the old fashion solvent based Urethane...VBP has it. If you currently are installing a system or are interested in establishing a new business...You owe it to yourself to call VBP for more information.

Acid Stain Listed At \$25 MSRP

VBP manufactures a line of Acid Stains under the Etch Stain Label. Etch-Stain is available in 8 standard colors. When applied to a finished concrete or Ardex® Self Leveler, Etch Stain transforms an ordinary concrete slab into a luxurious floor, resembling marble or stone. When stained and scored, Etch Stain creates the appearance of expensive flooring for a fraction of the cost. Unlike paint, Etch Stain reacts with the minerals present in the concrete, giving it the

look and feel of natural stone. Each concrete slab accepts the stain with varying degrees of intensity, creating stunning multi hued color variations while providing an aged look. Because we do not private label, Etch-Stain has a MSRP of \$25 per gallon and is available from our distributors nationwide.

Industrial Coating Spotlight

ICC 30 is a 30 mil epoxy coatings system designed for use over concrete service area floors found in auto, truck and aircraft maintenance facilities that are subject to light to moderate traffic and typical chemical spillage. ICC 30 floor system is a four-coat application consisting of VAPOR-STOP PRIMER, two 4800 build coats and then top coated with the 5300 Protective Chemical Resistant Urethane. ICC floor is intended for applications over concrete and existing concrete coatings where strong durability and chemical resistance are desired. ICC offers the protection that comes with a 30 mil epoxy floor system. Consult Visit the VBP web site for more information at www.garagecoatings.com

Other Industrial Flooring Systems

- ICC 65 65 Mil Industrial Broadcast System
- CQ Floor 100 Mil Decorative Color Quartz

Technical Corner Aug. 2005

Q. Does concrete always need to be acid etched before I install a coating?

A. No acid etching is not always needed. As long as the concrete surface is porous our concrete coating products will adhere. If there is a sealer or other layer then mechanical preparation may be required.

Consult the VBP technical department for detailed information.

Web Site

VBP has recently updated their company web site. "We wanted to provide our customers a web site that is easy to navigate and where needed information can be obtained easily, states VBP webmaster". This was quite a daunting task because VBP has such a broad customer base. The site needed to be easily navigated by Architects, Contractors, Consumer and Distributors. You will find product brochure, install guides, MSDS's, Technical Data, Installation Videos and more at www.garagecoatings.com. Please take a few moments and view all of the information at www.garagecoatings.com

Concrete Sealer Spotlight

5400 Versa-Thane W is a Waterborne Chemical Resistant Urethane

that exhibits excellent wear and U.V. Stability. The film build, gloss and chemical resistance are comparable to solvent based systems, yet without the intense odor associated with them or the high VOC levels. New technologies allow us to produce a water based product that is much higher in solids as well as attain thicker film build with no out gassing problems that its predecessors were notorious for. This allows the applicator to use the product during normal business hours where customers or neighboring tenants won't be disturbed by an offensive solvent odor, yet not sacrifice any of the physical properties we expect from the urethanes we are all so familiar with. VBP manufactures a complete line of Concrete Floor Sealers.

Other Concrete Sealer Products 2 Component

- 5000 Poly Urea 0 VOC
 - 5300 100 & 250 VOC Chemical Resistant Urethane
 - 4000 Waterborne Breathable Epoxy
 - 4100 Moisture Emission Blocking Epoxy
 - 4195 Chip Receiving Epoxy
 - Vapor-Stop Pigmented MVE Blocking Epoxy
 - 4800 General Use Epoxy
 - 4800 NY Non Yellowing General Use Epoxy
- ### Single Component
- Aquaguard Self Cross Linking Waterborne Sealer
 - Versa-Glaze Gloss Solvated Acrylic Sealer
 - Versa-Glaze Matte Solvated Acrylic Sealer

Decorative Concrete Coating Spotlight

Kwik-Top consists of a Proprietary Liquid Polymer, specially formulated Cement blend, aggregate and modifying additives which are mixed by the applicator on the job-site. Kwik-Top has been specially formulated for the well balanced combination of performance, ease of installation and minimal down time. The Grout Color

also acts as the primer and best of all, it can be rolled onto the concrete. No more troweling is needed for the first layer. This saves time and money. Just one more reason VBP products stand out above the rest. Use Kwik-Top to apply broom, knock-down, troweled and orange peel finishes over sidewalks, pool-decks, driveways or other floor surfaces.

Other Decorative Concrete Overlays

- Versa-Crete 1/4-inch Stamped Concrete
- Nano-Crete Concrete that goes on Like Paint

Nationwide Training Classes

VBP is conducting training classes nationwide. In addition to having a Las Vegas class every other month, we will also be holding classes in New York, Texas, North Carolina, Oregon, Nevada and California. Education is an understatement of what you receive at a

training class. We provide an educational experience in a class like setting conducted by Simon Gonzales, VBP Vice President with more than 30 years experience within our industry. We also provide product literature, and step by step guidance through all phases of the coating application. Expect to learn how to apply the top products in our line as well as becoming informed on what products to use, where to use them and more importantly where not to use them. Sign up or view our schedule on line at www.garagecoatings.com.

Research & Development

Research and development is a vision; an ongoing process that increases the integrity of our products. At Versatile Building Products, Inc. we dedicate time and energy to the development of simple, yet effective and dependable systems. Developing easy-to-apply systems and products is not a straightforward process, and very few companies have the resources needed to develop and maintain their quality. Versatile maintains a research lab staffed with two chemists who specialize in the formulation and applications of coatings within our industry.

Distributor Corner

VBP has just signed an exclusive distributor for the Liquid Granite line in Canada. COACH HAUS of Canada is based out of Toronto. View all current distributors contact information at the VBP web site www.garagecoatings.com
